

# JUNG PUMPEN COMPLI 1500/2500 SEWAGE LIFTING STATIONS

## APPLICATION

The compli 1500 and 2500 tank systems have been designed for large industrial and communal wastewater volumes as well as for the connection of streets or other community effluent systems. In order to ensure a practical arrangement, special importance was attached to easy installation.

The submersible unit is permitted for general use in areas subject to flooding without requiring additional outlay. The control unit has to be fitted in a well ventilated flood-proof room.

The construction with PE tanks has freely accessible drains and a clamp-type inlet flange for easy installation. The top-mounted cleaning opening and the easy replaceability of the pre-mounted pumps also ensure time-saving servicing.

For application areas with special obligations for fire protection like airports or underground railways we recommend our sewage liftings stations in stainless steel on request.

- Submersible
- Large storage capacity
- Selectable inlet position
- PE-tank

compli 1500

compli 2500

We reserve the right to change specifications without notice Pump performance is subject to ISO 9906 tolerances

The minimum flow velocity in the pressure piping must be 0.7 m/s according to EN 12056. This data is represented in the performance curve as a limit of application.

## SEWAGE LIFTING STATIONS

# JUNG PUMPEN COMPLI 1500/2500 SEWAGE LIFTING STATIONS

## TECHNICAL DATA

### Pump

Vertical, single-stage, submersible, single-vane impeller with spiral housing and horizontal outlet flanged on to a stable duckfoot bend as well as low-noise and low-vibration absorber.

### Bearing

Common shaft for pump and motor, grease-packed ball bearing.

### Motor

Submersible, IP 68 type of protection, insulation class F, winding thermostats for the protection of the drives against overheating, automatic start-up by three-contact circuit and control, operating mode S3 in keeping with VDE.

### Seal

Silicon-carbide mechanical seal independent of the sense of rotation, oil chamber and artificial carbon mechanical seal (or duplex rotary shaft seal) to motor compartment, safe to run dry, connection options for seal leak detector.

### Materials

Tank made of corrosion-resistant and environmentally friendly polyethylene, pump and motor housing, impeller and duckfoot bend made of wear-resistant grey cast iron, shaft completely covered against the material to be transported, rubber insulated hose.

### Scope of supply

Tank system in keeping with German / international standard DIN EN 12050 in assembly groups, prepared for final

assembly on site: Tank with clamp-type flange DN 150, two mounted submersible pumps and automatic level control, duckfoot bend, mounting material, elastic connections for the DN 70 ventilation and duckfoot bend connections with clamps, control with motor protection for automatic two-way connection with mains-dependent alarm system, potential-free contact for collective failure messages, hand-0-automatic switch and optical display of sense of rotation, alarm and operation. To be fitted with a micro-processor control as well upon request. Cable between pump and control 10 m.

Accessories to be ordered according to mounting drawing.
