

PENTAIR JUNG PUMPEN

SIMER 6 | SIMER 6S UTILITY PUMPS

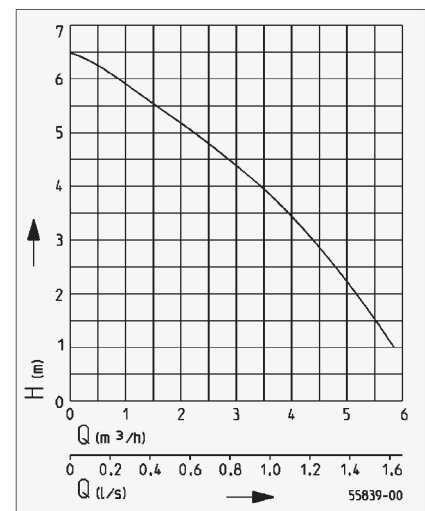

The Simer utility pump has been an indispensable tool for decades when it comes to pumping water down to a residual level of just 2 mm.

The new **Simer 6** scores with more pumping capacity than its previous model. Compared to the Simer 5, the maximum flow rate has been increased from 4.5 m³/h to 6 m³/h. The pumps are ideal for pumping water from basements, swimming pools, tennis courts, pits that have already been grouted or from flat roofs.

The **Simer 6S** version **with an integrated water level sensor** offers particular convenience. The pump works reliably without you needing to constantly monitor the water level.

All relevant pump components are available as spare parts. If a part has to be replaced, there is no need to dispose of the whole pump.

- Removes water down to a level of 2 mm
- Pumps from a water level of just 5 mm
- 40 % higher flow rate than the previous version
- Robust aluminium housing „Made in Italy“
- Patented level control (6S)
- Integrated non-return valve
- Replaceable cable inlet
